# **G<u><u></u></u>INSTEK**

Simply Reliable

## **FEATURES**

- 500 MHz Bandwidth, 2/4 Input Channel
- 4GSa/s Real-time Sampling Rate and 100GSa/s Equivalent **Time Sampling Rate**
- 25k Points Memory for Each Input Channel
- VPO (Visual Persistence Oscilloscope) Technology to Display Less-Frequently-Occurred Signals
- 8" 800 x 600 High Resolution TFT LCD Display
- Unique Split Screen System with Independent Setting and Display for Each Input Channel
- Three Built-in Input Impedance Selections:  $50\Omega/75\Omega/1M\Omega$
- Optional Power Analysis Software for Power Source Measurement and Analysis
- Optional Serial bus Analysis Software for Trigger & Decode of I<sup>2</sup> C, SPI and UART Interfaces

# 500 MHz Digital Storage Oscilloscope

The GDS-3000 Series digital storage oscilloscope is a full-featured and powerful tool that allows you to tackle complex measurement issues with ease.

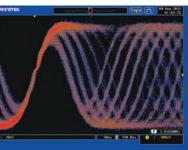

The GDS-3000 Series, carrying a maximum bandwidth of 500MHz, is equipped with a real-time sampling rate up to 4GSa/s and an equivalent-time sampling rate of 100GSa/s. The large 8-inch SVGA LCD screen, combined with the advanced digital signal processing technology VPO, provides meticulous detail and clarity for the displayed waveforms. The GDS-3000 Series gives you confidence not to miss any part of the test signal in the product verification and debugging stages and allows you to speed up your task without hesitation.

### 4GSa/s Sampling & VPO Technology

The GDS-3000 Series adopts VPO (Visual Persistence Oscilloscope) signal processing technology to enhance the performance of multi-gray-scale waveform display. The FPGA parallel processing, instead of conventional microprocessor architecture, is applied in GDS-3000 Series design to significantly increase the data processing speed and therefore increase the waveform update rate. This technology allows the GDS-3000 Series to display waveforms with various gray scales based on the occurrence frequencies, a fashion analogous to the analog oscilloscope display. As the visual persistence oscilloscope contains 3-dimension waveform data, including amplitude, time and intensity, for each waveform spot, it provides more useful signal information than a normal digital storage oscilloscope can do. The highspeed data processing of VPO technology enables the signal analysis of rapid events such as video, jitter, glitch and runt.

The GDS-3000 Series features a maximum real-time sampling rate of 4GSa/s, which is superior to most of the equivalent oscilloscopes available in the market today. The series is also equipped with an equivalent- time sampling rate of 100 GSa/s, providing an economic solution for the waveform acquisition and reconstruction of very high-speed repetitive signals. The fast-acquisition capability along with VPO signal processing technology, make GDS-3000 a very handy tool for observing occasionally-occurred signals such as transient and inrush events. With powerful technology, GDS-3000 Series gives you full confidence in every acquisition of complex waveform that adheres to high-speed circuit design of modern products.

## VPO Visual Persistence Oscilloscope Signal Processing Technology

The GDS-3000 Series equipped with VPO signal processing technology and 5GSa/s high-speed real-time sampling rate, allows you to view the video signal clearly.

#### A Hi-tech DSO Platform

The GDS-3000 Series is a new platform of 4-input channels, 500MHz bandwidth, 5GSa/s sampling rate, and VPO waveform display. The split screen feature has been designed to meet the requirements of multi-window & multi-signal tests in the research and the manufacturing fields. The optional power analysis software and the optional serial bus analysis software are available to facilitate the engineer's tasks in testing and manufacturing of the associated products. Three new differential probes, GDP-025, GDP-050 & GDP-100, and five new current probes, GCP-300, GCP-500, GCP-1000, GCP-530 & GCP-1030, are coming along with the GDS-3000 Series to provide total solutions for a wide variety of applications in the industry, service and education market sectors. The GDS-3000 Series, a high-tech platform carrying thoughtful features, brings very high customer value to both general purpose market and professional market.

### Serial Bus Analysis Software and Power Quality Analysis Software

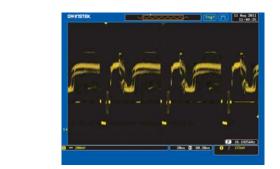

With widespread applications of embedded system adopting serial bus communication standards, resolving unexpected issues, such as propagation delay and bus contention, is often a challenge to design and testing engineers. The GDS-3000 Series provides (optional) design and testing engineers with powerful tools for the communication analysis and debugging of most the popular serial interface projects including I<sup>2</sup> C ,SPI and UART.

To fulfill the increasing power measurement demands, as a green energy trend, GDS-3000 provides an embedded power analysis software (optional), which includes measurements of Power Quality, Harmonics, Ripple and Inrush Current, meeting requirements of most power measurement standards.

# GDS-3000 Series

Color Mode

#### 1. 8"TFT LCD Panel

The bright 8" TFT LCD display makes multiple signal observation easy.

#### 2. 4GSa/s Real-time Sampling Rate for Fast Waveform Capture

The high speed sampling technology used for data acquisition truthfully reconstructs complex signals.

# 3. VISUAI Persistence Oscilloscope Signal Processing Technology

VPO signal processing technology displays waveforms in 3 dimensions - amplitude, time and intensity.

#### 4. Compact Design

With a depth of only 5 inches, the compact size of the product doesn't occupy valuable work space.

#### 5. Split Window Function (Split Screen)

The GDS-3000 Series supports up to four independently operated and triggered windows at a time so that you can simultaneously monitor up to 4 signals carrying different characteristics.

#### 6. Auto-Range Function

The Auto Range function automatically adjusts the time base and/or the vertical scale of displayed waveform when the frequency and/or the amplitude of input signal changed.

#### 7. High Speed USB 2.0 Port

USB Host port for easy access of stored data.

#### 8. Three Input Impedance Selections

The three built-in input impedances ( $75\Omega$ ,  $50\Omega$ ,  $1M\Omega$ ) can be selected to meet the requirements of various applications.

#### 9. Serial Bus Triggering and Decode ( Optional )

2 dedicated keys used for setting recall in the serial bus analysis applications supporting UART, I  $^2\,C$  and SPI serial bus.

#### 10. Independent Channel Design

The independent zone of vertical operations for each channel substantially increases the measurement efficiency.

\* 3, 4 Channels on Max Sampling Rate : 2GSa/s (GDS-3504)

## GDS-3000 Series Visual Pe

#### 11. USB Ports as Standard

USB Host/Device interfaces for easy access of stored data and direct print-out through a PictBridge compatible printer.

#### 12. LAN Port as Standard

LAN interfaces for remote control and monitoring.

#### 13. Line Output

3.5mm stereo sound output for Go/NoGo buzzer.

#### 14. RS-232 Interface

#### 15. SVGA Video Output

SVGA video output port allows the transfer of DSO screen image to an external projector or monitor for remote monitoring or big screen observation.

#### 16. Go/NoGo BNC

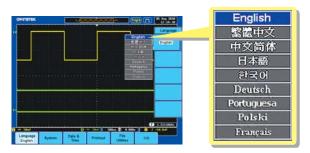

The open collector output signal allows external instrument to be controlled by the test result.

#### 17. Trigger Output Port

A 5V TTL Level trigger signal is available for the synchronization with other devices.

#### 18. Self-Calibration Signal Output

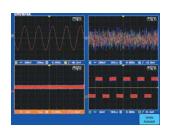

Self-Calibration signal output for input channel vertical gain calibration.

#### Multi-Language Support

The GDS-3000 Series interface supports multiple languages to provide the upmost convenience for cross-country team cooperation and multinational engineering efforts.

UNIQUE SPLIT SCREEN FUNCTION

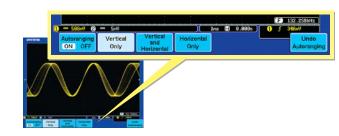

The unique split screen feature of GDS-3000 Series allows each input channel to be operated independently with respective setting and waveform display. The time base, the vertical sensitivity, and the trigger selections can be done by each channel separately, and the waveform of each input signal can be shown on the individual part of the screen. This nearly four-DSO-in-one feature\* is very useful for the applications that need to simultaneously see the details of multiple waveforms with very different characteristics. The 8-inch high resolution 800x600 LCD display makes the split screen a pleasant observation environment to view the details of complex signals.

#### COMPLETE SET of TRIGGER FUNCTIONS

Besides Edge trigger, the GDS-3000 Series also offers various trigger functions, including Video, Pulse Width, Runt, Rise Time & Fall Time (specific time length), Alternate, Delay by Time, Delay by Event, and Hold-Off. The high sampling rate, the VPO signal processing & display, and the flexible trigger function all together make the GDS-3000 Series a powerful tool for waveform capture and display of various types of signals.

#### AUTO RANGE for both TIME BASE and VERTICAL SCALE

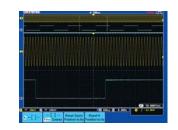

The Auto Range function automatically adjusts the time base and/or the vertical scale of displayed waveform when the frequency and/or the amplitude of input signal changed. This function gives user the convenience to have DSO always display waveform in a proper fashion on the screen tracking the frequency and amplitude changes of the input signal. It is especially useful when the user needs to alternately probe and test multiple circuit points containing signals with different frequencies and amplitudes.

#### 28 AUTOMATIC MEASUREMENTS

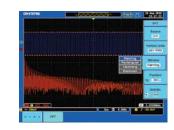

The GDS-3000 Series supports simultaneous measurement of up to 28 waveform measurement items grouped into three main waveform parameters: amplitude, time and delay measurements. The display modes include an individual mode and a Display All mode. The former can display any 8 of the automatic measurements while the later can display all the automatic measurements for a channel.

# DUAL DISPLAY WINDOW ZOOM

The GDS-3000 Series Window Zoom function provides dual display mode to show the main waveform and the magnified section of zoomed-in waveform at the same time. Under "Zoom" mode, the width and the position of zoom-in window over the main waveform can be selected to get the magnified waveform as needed for detailed observation. To quickly and accurately move the zoom-in window to the expected position, the "Coarse" mode helps move the window to the needed position immediately and the "Fine" mode provides fine adjustment to precisely place the window in the exact position.

## F. FFT TEST FUNCTION

To observe fundamental and harmonic frequency components of a signal, the FFT function on a digital storage oscilloscope is often used. Typically the traditional unit of the FFT is decibel (dB). However, when using dB it is sometimes difficult to identify the fundamental frequency of a signal from a noisy spectrum. With FFTrms function, the GDS-3000 Series can clearly display the fundamental frequency of an acquired waveform. The FFT function of GDS-3000 supports Rectangular, Hamming, Hanning, and Black-harris windows.

### G. THREE INPUT IMPEDANCE SELECTIONS

Three input impedance,  $1M\Omega$ ,  $75\Omega$ , and  $50\Omega$  are available for user's selection. The flexibility of impedance selections, including  $1M\Omega$  to get minimum loading effect,  $75\Omega$  to accommodate Video transmission applications and  $50\Omega$  to fit RF communication applications, extends the GDS-3000 Series utilization range.

#### EXTENDABLE APPLICATION SOFTWARE

The GDS-3000 Series allows future installation of additional application software at the user site. This provides an open environment for optional software upgrade and additional feature built-in in whenever the GDS-3000 Series user has the need. The flexibility of software installation platform keeps the DSO being in use always up-to-date.

#### FREE REMOTE CONTROL SOFTWARE

Using a USB port coupled with FreeWave remote monitoring software is the easiest and most convenient way to capture data from the GDS-3000 Series. With FreeWave, a screenshot can be saved as an image file (.bmp/.jpg)and waveform data (.csv).

Not only can FreeWave monitor and record waveforms over a long period of time, but previously recorded waveforms can also be observed. Instrument settings can even be configured without the need to learn incomprehensible command line syntax. With the simple user interface and robust features, FreeWave allows you to get the most out of the GDS-3000 with little effort.

# GDS-3000 Series Visual

#### H. X-Y MODE

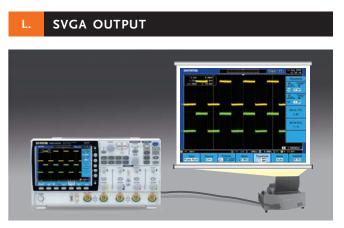

The X-Y mode of GDS-3000 defines CH1 and CH3 as the horizontal axis and CH2 and CH4 as the vertical axis, allowing the display of 2 sets of X-Y pattern simultaneously. The measurement items include Rectangular, Polar, Product and Ratio that fits most of the popular X-Y applications. The X-Y pattern and the time domain waveforms can be shown on the screen simultaneously. Two cursors on the time domain waveforms allow the identification of cursor-associated locations on the X-Y pattern display.

#### J. WAVEFORM FILE PREVIEW

The GDS-3000 provides an optimized operation interface for viewing screen captures. Generally, the oscilloscope may store large amounts of waveform data after a long period of time. To help prevent engineers from selecting the wrong file from a large number of stored waveform files, the screen capture preview function can be used to preview the waveform file without opening files so that operation of the oscilloscope is more efficient and convenient.

A SVGA video output port in the rear panel of GDS-3000 Series allows the screen-image transfer from DSO to an external projector or a monitor for remote monitoring or big screen observation. This direct image transfer feature greatly increase the efficiency of presentation in the meeting, teaching in the class, remote monitoring of hazardous events from a secured zone, and fast and easy monitoring in the production line.

### VARIOUS INTERFACES SUPPORT

Two high-speed USB 2.0 Host ports located in both front panel and rear panel are used for easy access of stored data. In the rear panel, a USB Device port is available for remote control and hardcopy print-out through a PictBridge compatible printer. RS-232 and LAN interfaces are provided as standard for system communication & ATE applications.

With serial bus technology being widely used in embedded applications,

the proper triggering and analysis of flowing data, control signal and

associated pulse waveforms in serial bus communication has been a difficult job and challenge to design engineers. The Serial Bus Analysis software of GDS-3000 Series carries complete analysis tools for triggering and decoding of commonly used serial bus interfaces, including  $I^2$  C, SPI

A SVGA video output port allows the transfer of DSO screen image to an external projector or monitor for remote monitoring or big screen observation. A GPIB to USB adaptor is available as an option for interface conversion though the USB Device port in the front panel.

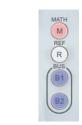

#### SERIAL BUS ANALYSIS SOFTWARE SUPPORTING 1<sup>2</sup>C, SPI and UART (OPTIONAL)

I<sup>2</sup>C Serial Bus Analysis Software

SPI Serial Bus Analysis Software

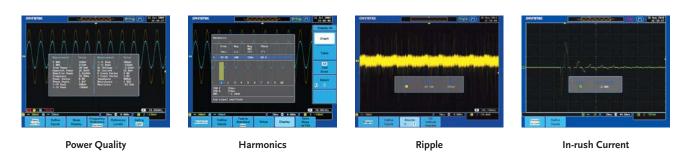

UART Serial Bus Analysis Software

The GDS-3000 Series provides two dedicated keys in the front panel for tow sets of setting recall

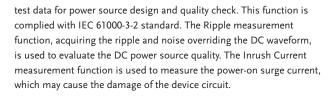

and UART. Without spending time to study serial bus regulation details, the user only needs to set the trigger condition on GDS-3000 to get the data slots of interest.

\* Only four-channel models support SPI function.

#### POWER ANALYSIS SOFTWARE FOR POWER SUPPLY MEASUREMENTS (OPTIONAL) Ο.

The Power Analysis software contains four measurement functions, including Power Quality, Harmonics, Ripple and Inrush Current. The Power Quality analysis function allows the measurements of Voltage, Current, Frequency, Power and other quality related parameters for power source efficiency improvement. The Harmonics analysis function performs evaluation of power waveform distortion and gives harmonic

In addition to the standard passive probes, the optional current or differential probes can be used to perform additional tests or power analysis. The differential probes come in three bandwidths: 25MHz, 50MHz and 100MHz. The current probes come in a broad variety of bandwidth and current ranges (ranging from 50MHz/30A, 100MHz/30A, 40kHz/240A and 100kHz/100A), to cover any number of power supply testing applications.

\* The GCP-530/1030 must be used in conjunction with the GCP-206P/425P current probe power supply.
\* The GCP-206P is capable of powering 2 units of GCP-530 or GCP-1030 and the GCP-425P is capable of powering 4 units. \* The GCP-100 requires a standard 9V battery; The GCP-020 do not require batteries or a power supply source.
